Introduction to NLP

Penyusun Modul : Dennis Laorens Bawole
Editor : Citra Chairunnisa

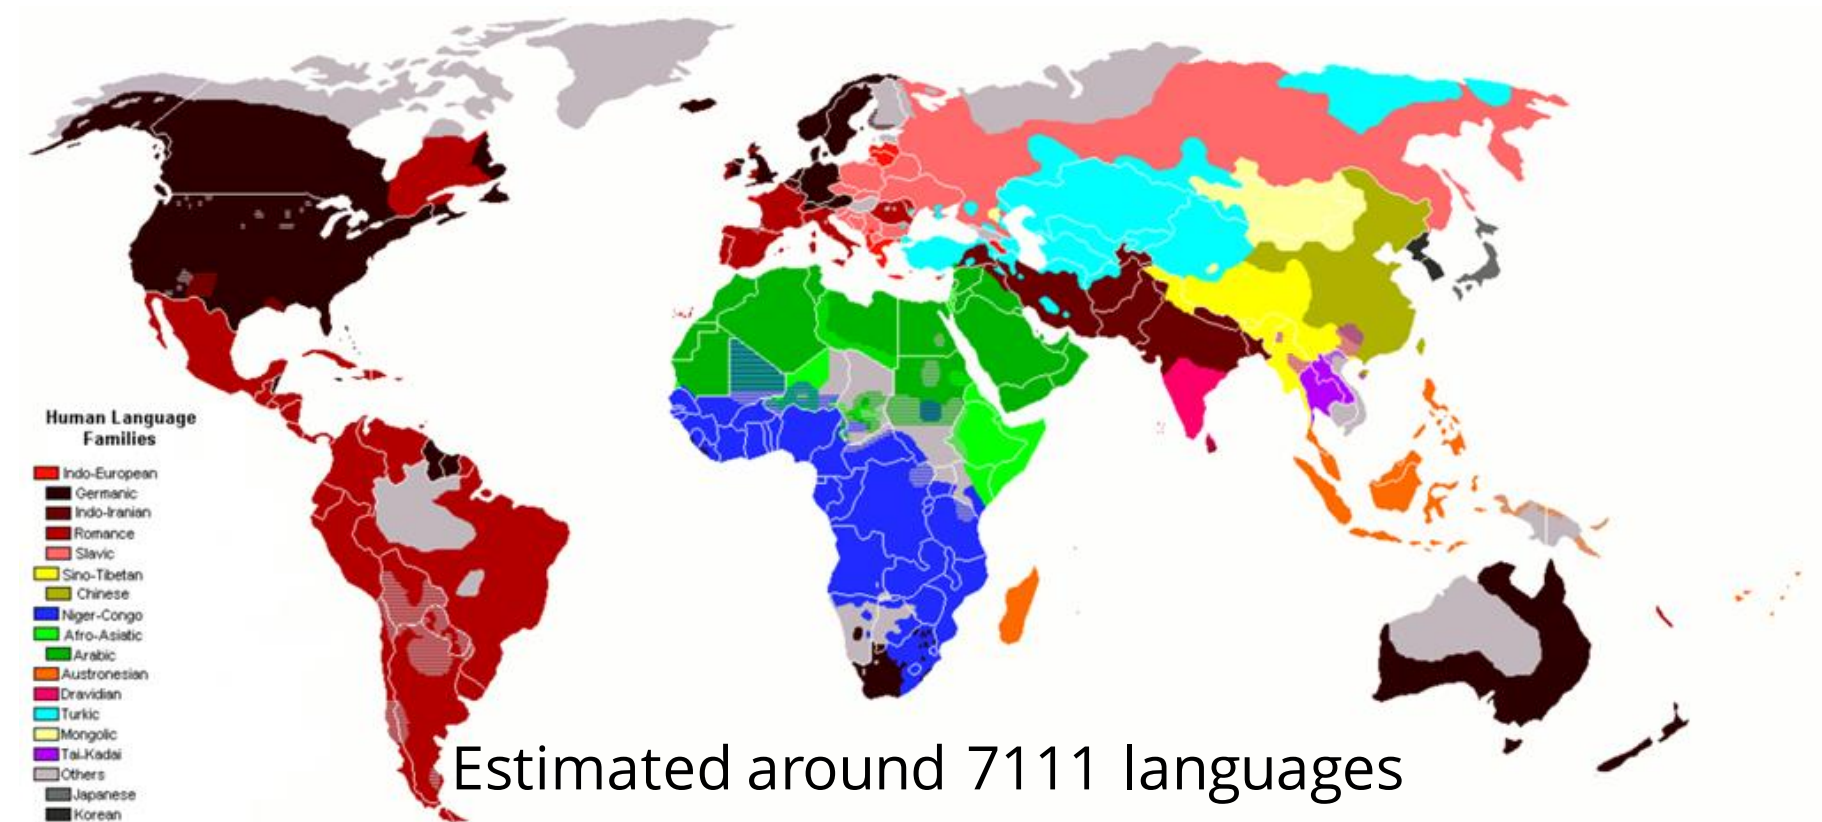

The Human Language

A way to communicate with other people

718

Local Languages

Estimated around 7111 languages
in the world

The Human Language

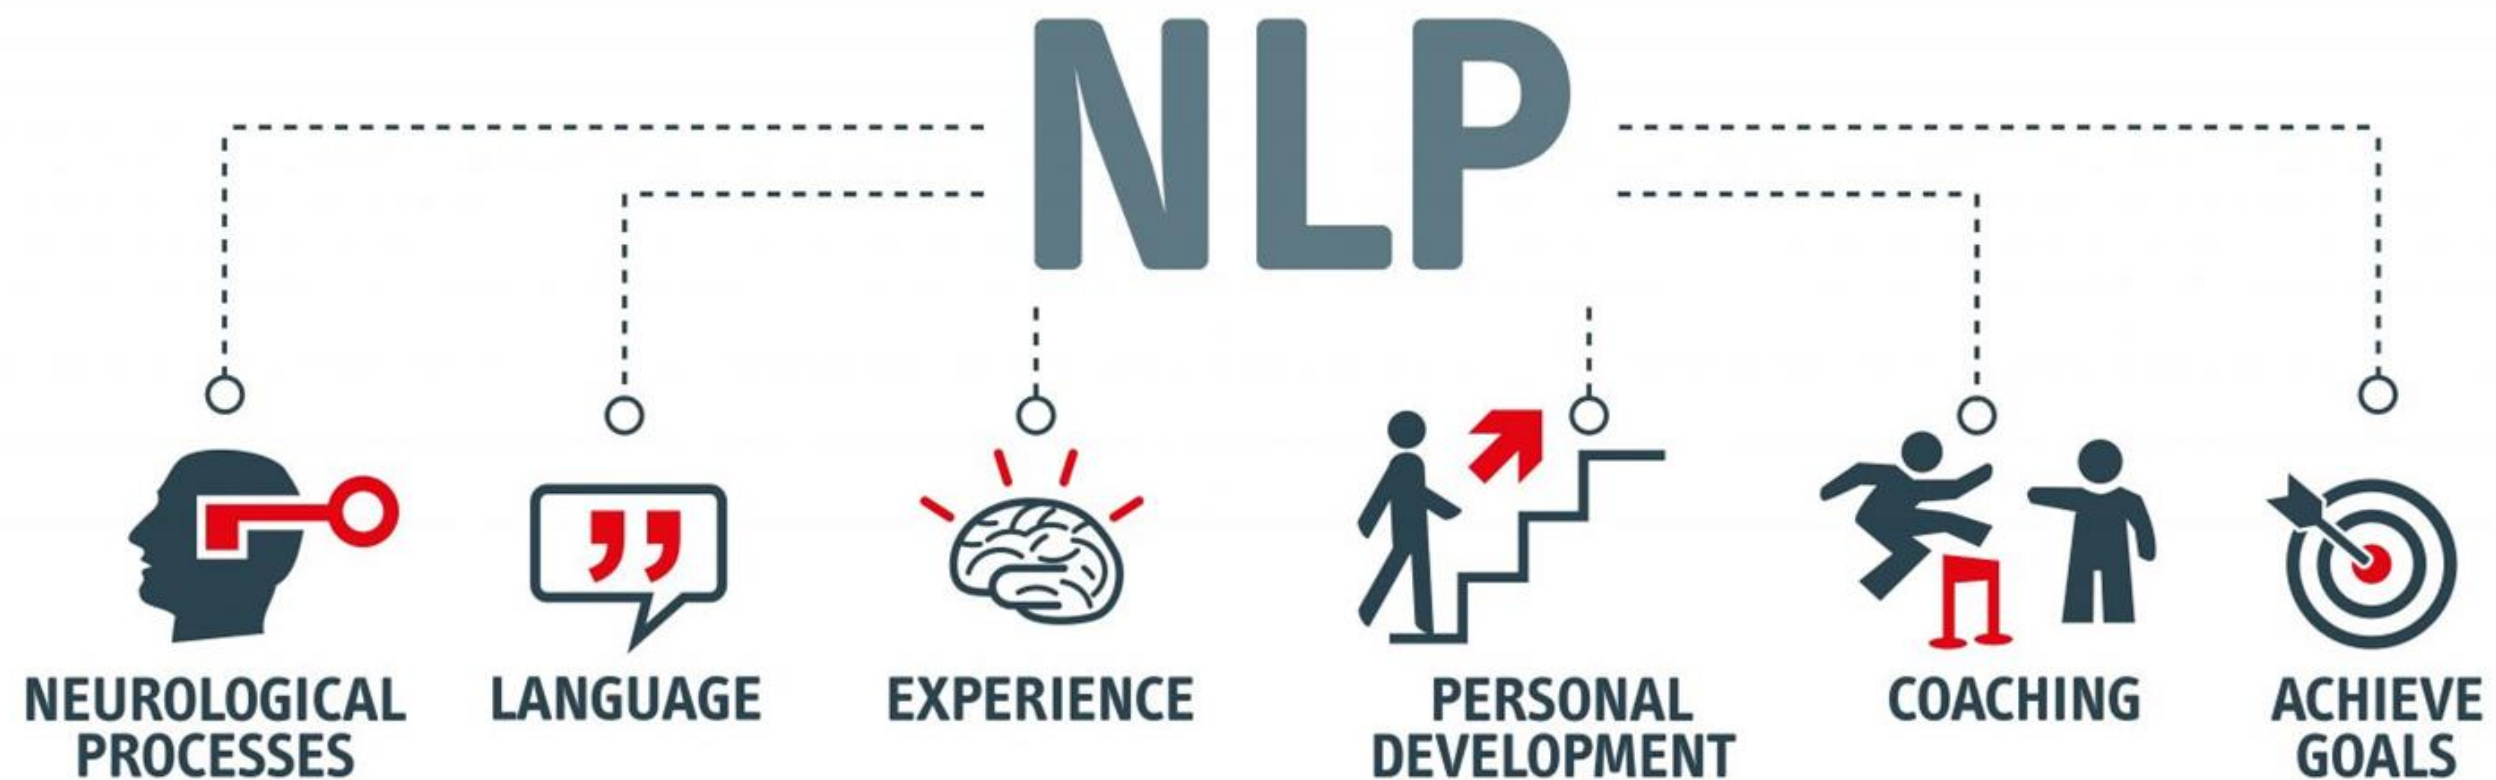

The Human Language

Understanding the
Human Language

=

Understanding the
basics of NLP

Why?

Uses Computer science as the programming basis

Uses AI to predict behaviors based on the dataset

Uses the Human Language as its dataset

So What is NLP?

NLP, also called Natural Language Processing is the manipulation of natural languages such as speech or text by software

Where have you seen NLP?

google translate

Keyword difficulty: 78.19% (for google.com database) — View full report for this keyword

san francisco weather
san francisco
san francisco giants
san fernando valley
san francisco state university
san francisco hotels
san francisco 49ers
san fernando
san fernando mission
san francisco zip code

Google Search I'm Feeling Lucky

How is NLP applied?

▶ The google search bar is designed using computer science and software techniques

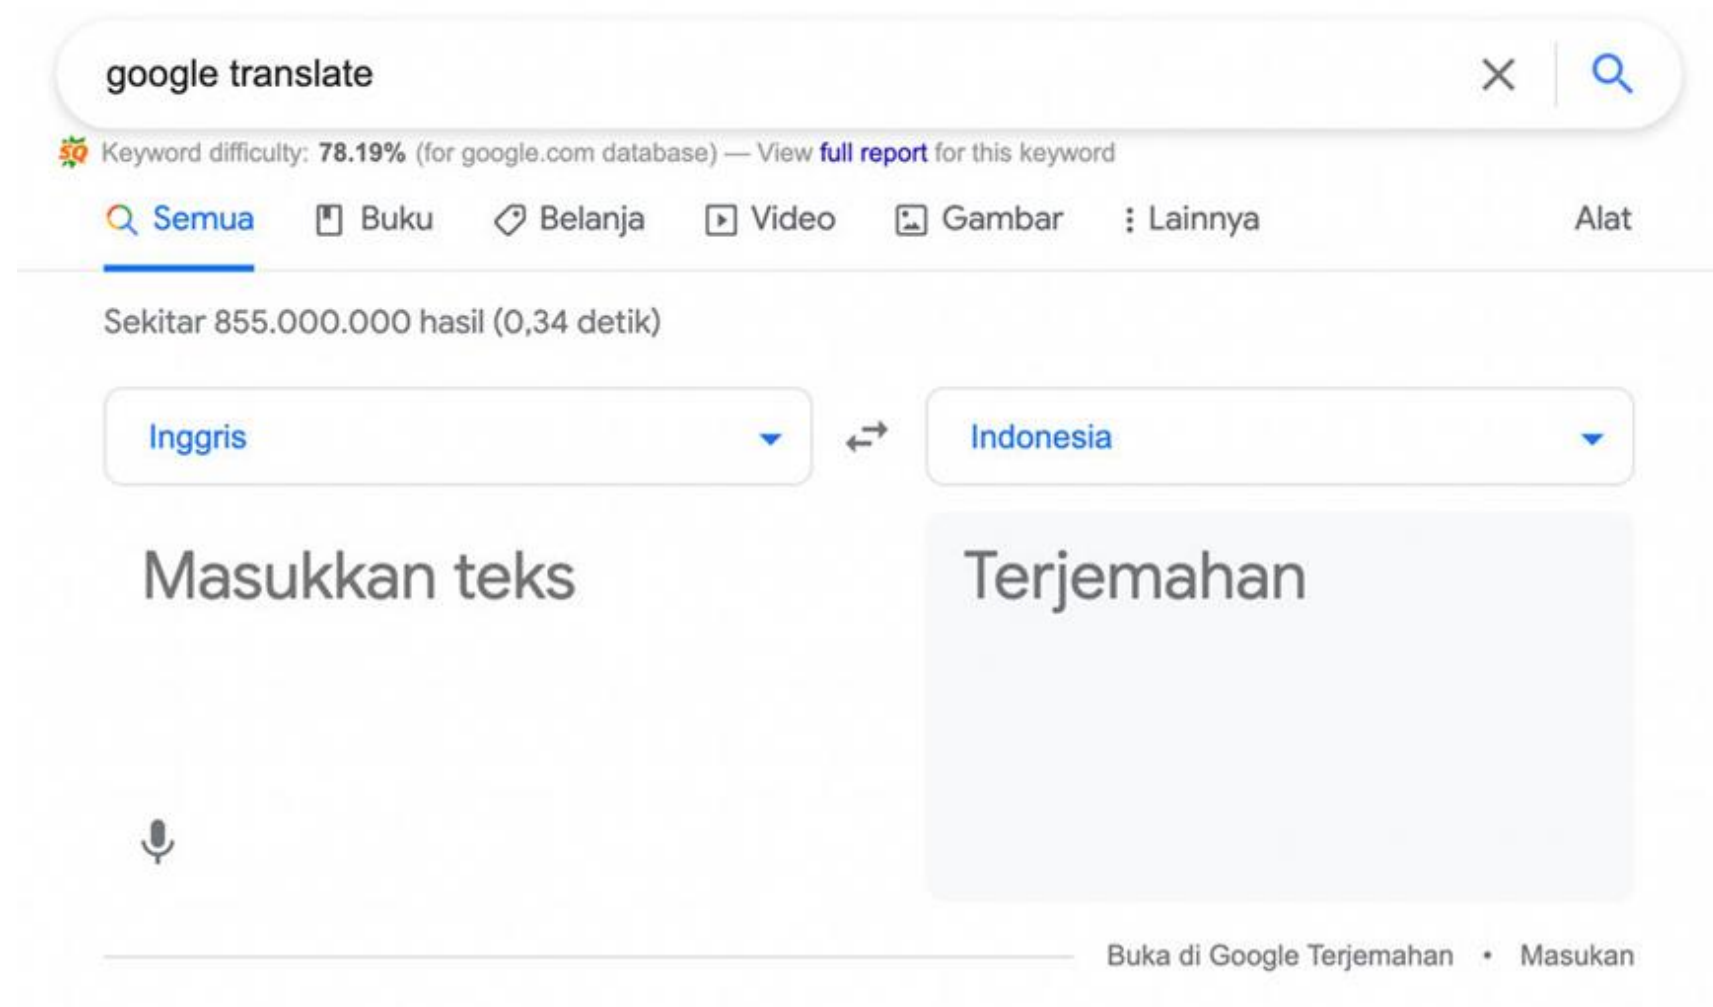

▶ While the input and output itself are words based on the human language, in this case the words are in English

▶ The search recommendations are available with the help of AI where research is done to predict the chances of words that will appear after a certain word is typed

How is NLP applied?

For the google translate page, the impact of AI is much more diverse as the type of language used as the input may vary while the resulted output is in a different language

This requires the AI too have a deep understanding towards grammar for every type of language used

How is NLP applied?

▶ The google assistant is a very complex product of the NLP field.

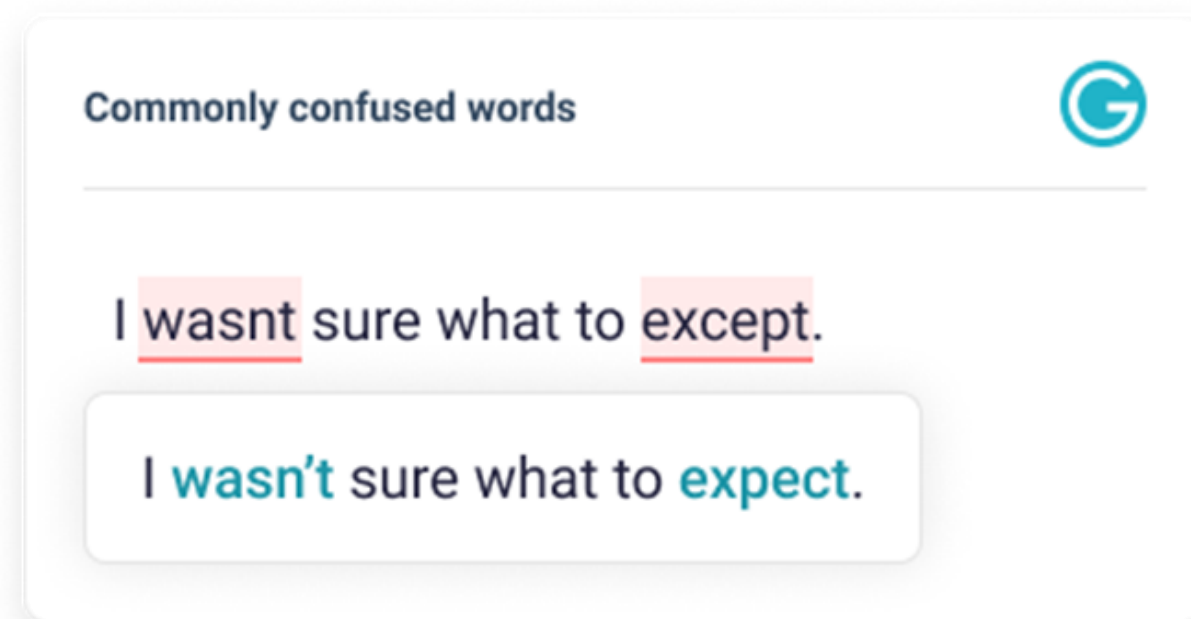

▶ It requires not only the understanding of basic grammar but also includes the use of STT (Speech To Text) technology which is another field of science that is highly complex.

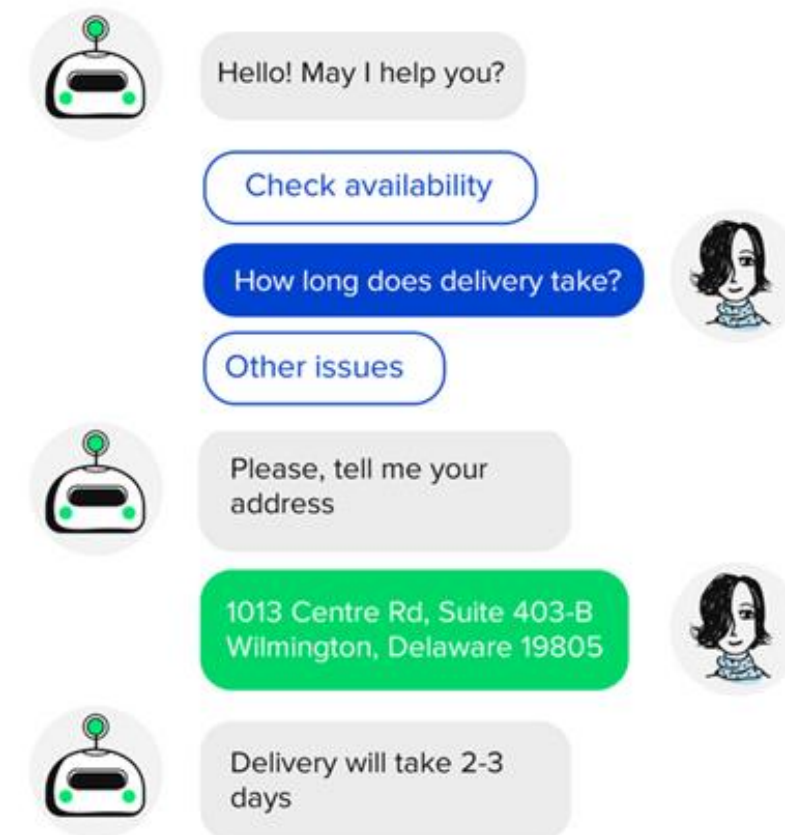

How is NLP applied?

There are much more examples on the impact of NLP in our daily life such as :

Spell Checking

Chat Bots

Goals

For this course, our target in learning NLP is to:

-  Gain a basic understanding of how NLP is used
-  Gain a basic understanding on the features that NLP has
-  Applying basic functions from the most used NLP libraries
-  Applying basic Exploratory Data Analysis on text data

Components of NLP

NLU (Natural Language Understanding)

- Enables human – computer interaction
- The field of NLP where computer tries to give meaning to words

NLG (Natural Language Generation)

- Generates words based on what has been understood by the computer
- As words may have multiple meanings, NLG generates words based on the context of the words prior

General processes for NLP

Tokenization

Stemming

Lemmatization

POS Tags

Named Entity
Recognition

Chunking

Tokenization

Dividing a sentence based on each word

Dividing

a

sentence

based

on

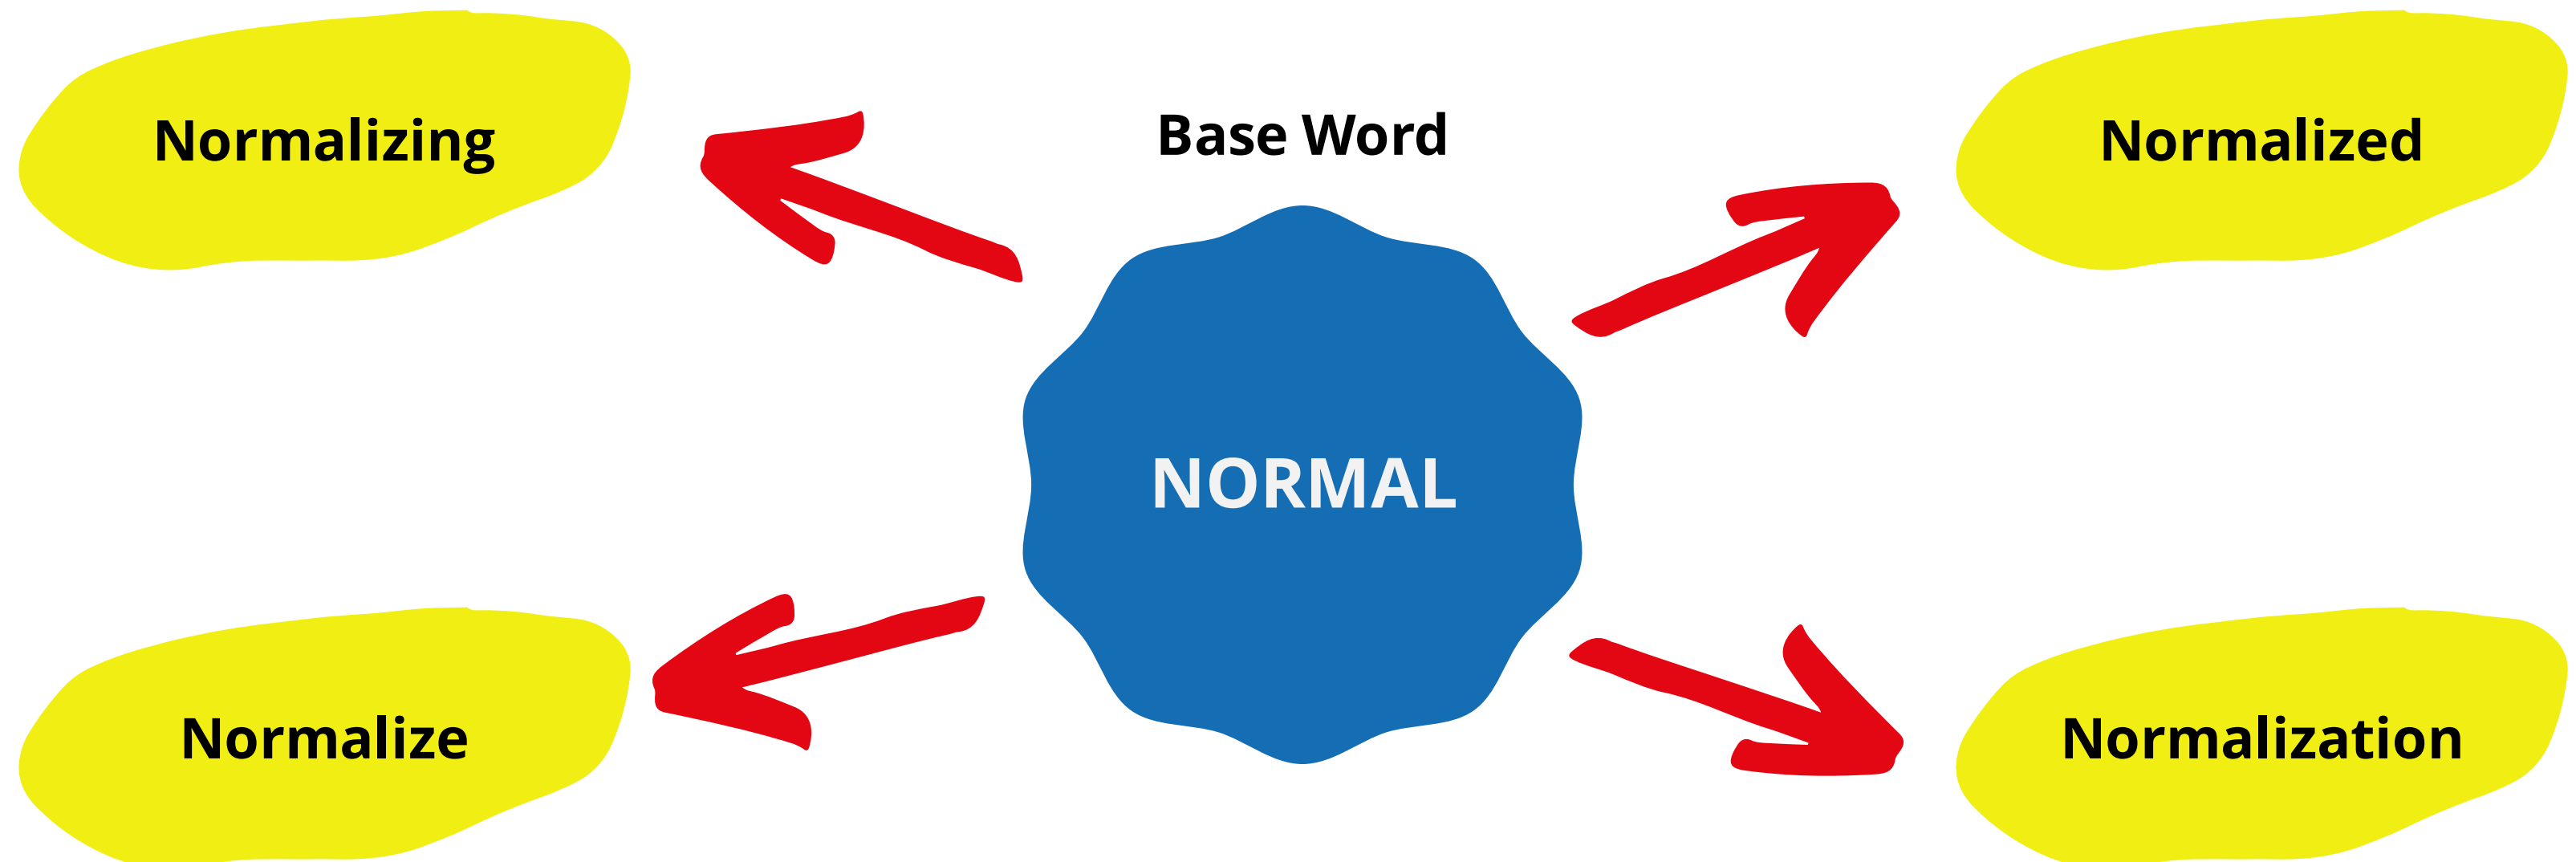

each

word

Stemming

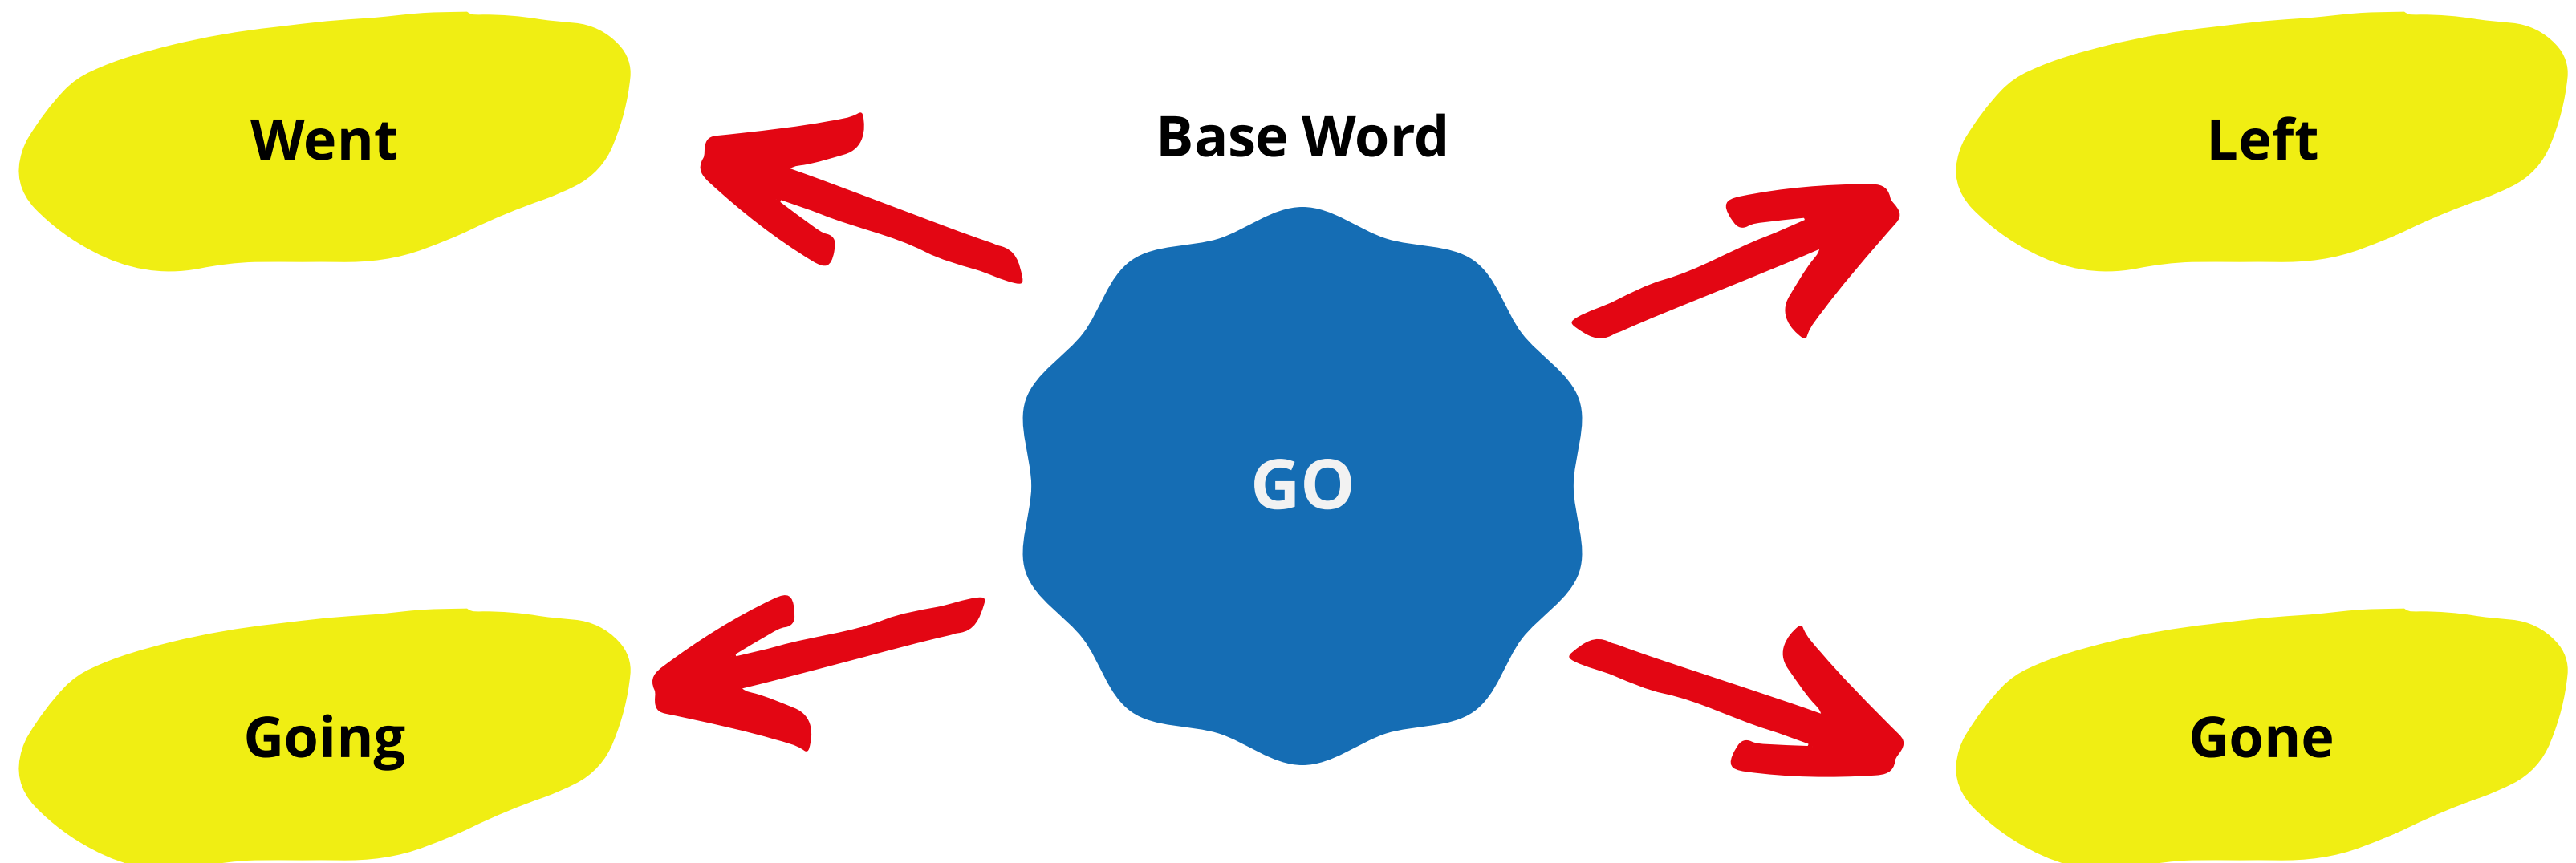

Normalizing a word into its base form

Lemmatization

Maps words that inflict the same meaning

POS Tags

Tagging a word based on its grammatical part of speech

WORD

- Jakarta
- Dance
- Closely
- Beautiful

PARTS OF SPEECH

- Noun
- Verb
- Adverb
- Adjective

Named Entity Recognition

Process of detecting a named entity such as location or person

"President Jokowi is heading over to Bogor in a car"

WORD

ENTITY

- | | | |
|-------------|-------|------------|
| • President | | • Job |
| • Jokowi | | • Person |
| • Bogor | | • Location |
| • Car | | • Vehicle |

Chunking

Picking up individual information and combining them into bigger pieces

“Budi likes Football”

WORD		BASE WORD		POS		ENTITY
Budi	Budi	Noun	Person
likes	likes	Verb	-
Football	Football	Noun	Activity

What do we do with the information?

- Computers are digital meaning information only has meaning when it is defined
- Computers cannot add $1+1$ if the values behind the numbers are not previously defined
- How does the computer use this information to do things like the google search bar does?

How does a computer understand words?

The Dark Knight - 2008

R
E
V
I
E
W

This may seem like faint praise, but about the highest compliment I can give Christopher Nolan's The Dark Knight right now is to say that there were many long stretches during which I didn't even realize it was a superhero movie

Glenn Kenny
MUBI
★ TOP CRITIC

Too much psychology and not enough pop. It's possible to be too serious, you know.

★ TOP CRITIC

You will feel utterly numb after the screening of The Dark Knight. The film is bleak and brilliant.

James Christopher
Times (UK)
★ TOP CRITIC

This is an impressive film in many ways, and Nolan directs with real confidence, yet the overall result feels cumbersome.

★ TOP CRITIC

Among the great strengths of The Dark Knight is the way it combines hardboiled naturalism with the kind of stunts and setpieces you expect in summer blockbusters.

Geoffrey Macnab
Independent (UK)
★ TOP CRITIC

To talk of Heath Ledger's performance is difficult, merely because, as gigantic as it is, it is only one important feature of an intricately wrought canvas.

Sentiment Analysis

A technique in the field of NLP that tries to identify and extract opinions within a given text.

SENTIMENT ANALYSIS

Positive

Great service for an affordable price. We will definitely booking again.

Neutral

Just booked two nights at this hotel.

Negative

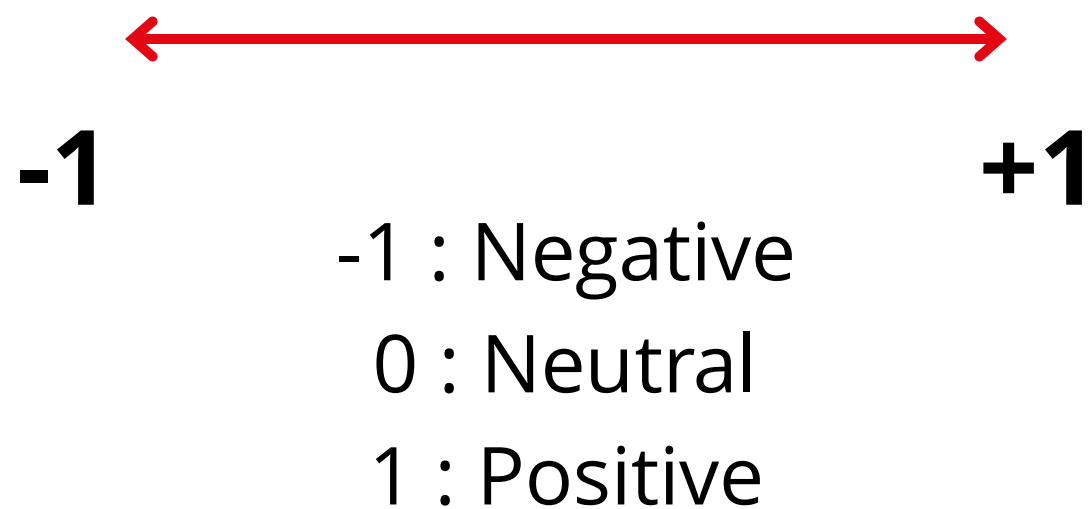

Horrible services. The room was dirty and unpleasant. Not worth the money.

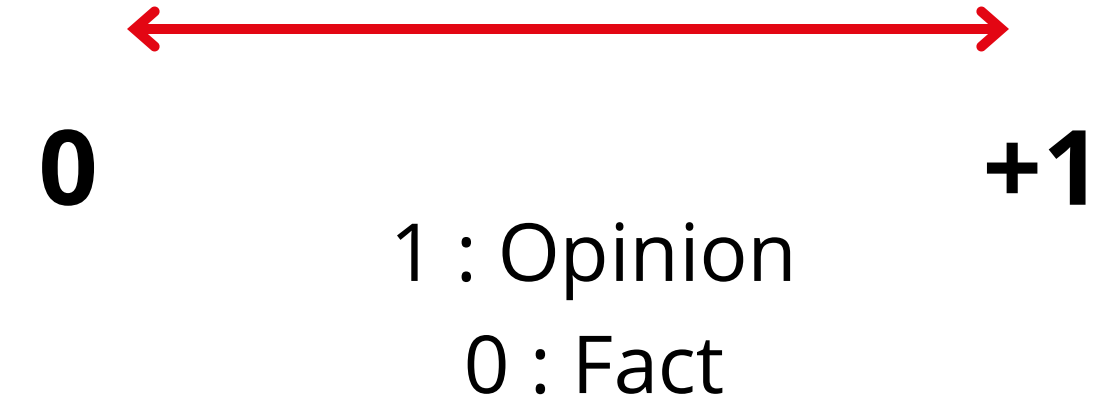

Sentiment Analysis

A combination of words can be reviewed as “Positive” or “Negative” based on the words that has been structured in the sentence. In general, every word has 2 parameters determining its positive or negative value which is

Polarity

Subjectivity

Sentiment Analysis

But some words can have multiple meanings such as the word great

Word Form	Sense	Polarity	Subjectivity
great	very good	1	1
great	of major significance or importance	1	1
great	relatively large in size or number or extent	0,4	0,2
great	remarkable or out of the ordinary in degree or magnitude of effect	0,8	0,8

But in the end, the computer averages the value from all variations of the word
and gives it its final value

Sentiment Analysis

When words are combined, a final value of polarity and subjectivity is earned

Word Form	Polarity	Subjectivity
great	0,8	0,75
not great	0,4	0,75
great	1	0,75
I am great	0,8	0,75

“Not” divides polarity by 2

“Very” multiplies polarity by 1.3
